

## Biological Encryption Ink Identity Technology

Revolutionary INKcrypt® technology was developed and IP protected by our team of US and German scientists to eliminate growing worldwide losses from counterfeiting and fraud. The system utilizes ink with unique DNA-identity as a positive differentiator between original and copy. A wide variety of inks for use in printing systems such as inkjet, flexo, gravure and writing instruments is now available with unique INKcrypt® DNA-identity to facilitate instant consumer authentication on the spot. INKcrypt® Ink can be purchased from [inkcryptink.com](http://inkcryptink.com) or licensed print system manufacturers.
